| Semester(s) in which the module is taught                                 | 6 <sup>th</sup> semester  |
| Person responsible for the module   | Asran Ilyas, ST. MT. Ph.D.  |
| Lecturer  | 1. Asran Ilyas, ST. MT. Ph.D.<br>2. Dr. Ir. Irzal Nur, MT.<br>3. Dr.phil.nat. Sri Widodo, ST. MT.   |
| Type of teaching,   | Teaching methods used in this course are: <ul style="list-style-type: none"> <li>○ Lecture (i.e., simulation, small group discussion, case study, collaborative, cooperating learning, and video-based learning)</li> <li>○ Structured assignments (i.e., essays and case study)</li> <li>○ Self-learning</li> <li>○ Practice (i.e., real data modeling using software package).</li> </ul>   |
| Workload  | 1. Lecture: <ul style="list-style-type: none"> <li>○ Class meeting; 16 x 2 x 50 minutes.</li> <li>○ Structured assignments; 16 x 2 x 60 minutes.</li> <li>○ Self-learning; 16 x 2 x 60 minutes.</li> </ul> 2. Total workload = 5440 minutes.  |
| Credit point  | 2 credits   |
| Prerequisites   | Exploration Techniques  |
| Intended learning outcomes  | <b>Competence</b><br>To be able to apply basic principles of geology, and engineering of physics, chemistry, mathematics, in analyzing and evaluating coal and mineral resources. (ILO-06)  |
| Course Learning Obejctives  | 1. Able to explain the definition, classification, and modifier factors of resources and reserves, as well as basic concepts of reserves modelling and evaluation.<br>2. Able to explain the units used, basic calculation formulas, various terms and limitations in reserves modelling and evaluation.<br>3. Able to distinguish between deterministic and stochastic modelling techniques in reserve modelling and evaluation.   |
| Module content  | 1. Background, basic concepts, and main requirements for modeling and evaluating of mineral and coal deposits.<br>2. Important factors, sequence of work, and units used in modeling and evaluating of mineral and coal deposits.<br>3. Modeling and reserve evaluation techniques and methods : <ul style="list-style-type: none"> <li>○ Conventional methods :               <ul style="list-style-type: none"> <li>- Polygon method.</li> <li>- Cross-section method.</li> <li>- Isoline method.</li> </ul> </li> <li>○ Modern methods :               <ul style="list-style-type: none"> <li>- Block modeling method (deterministic method).</li> <li>- Block modeling method (stochastic method).</li> </ul> </li> </ul> 4. Application of computer software in modeling and reserve evaluation (ArcGIS, Surfer, Surpac, and SGeMS).<br>5. Fieldwork, data processing, and analysis. |
| Applicability   | Compulsory in Bachelor Degree in Mining Engineering.  |
| Admission and Examination requirement                                     | Minimum attendance requirement 80% from total lecture.<br><b>Study and examination requirements:</b> <ul style="list-style-type: none"> <li>○ Students must attend 15 minutes before the class starts.</li> <li>○ Students must switch off all electronic devices.</li> <li>○ Students must inform the lecturer if they will not attend the class due to sickness, etc.</li> <li>○ Students must submit all class assignments before the deadline.</li> </ul>   |

| Credit points  | 2 Credit  |
| Prerequisites  | Mineral Processing  |
| Intended learning outcomes   | <b>Competences</b><br>To be able to study and take advantage of knowledge and technology in engineering of coal and mineral processing. (ILO-09)  |
| Course learning outcomes   | 1. To be able to review the characteristics and utilization of Indonesian coal.<br>2. To be able to explain technologies in coal beneficiation<br>3. To be able to explain coal combustion and conversion technologies.   |
| Module content   | 1. History of coal processing and utilization in Indonesia<br>2. Distribution, quality and proportion of coal in Indonesia<br>3. Coal classification<br>4. Coal quality parameters<br>5. Coal beneficiation technologies<br>6. Coal combustion technology<br>7. Coal liquefaction<br>8. Coal gasification   |
| Applicability  | Compulsory in Bachelor Degree in Mining Engineering   |
| Admission and Examination requirement                              | Minimum attendance requirement 80% from total lecture.<br><b>Study and examination requirements:</b> <ul style="list-style-type: none"> <li>o Students must attend 15 minutes before the class starts.</li> <li>o Students must switch off all electronic devices.</li> <li>o Students must inform the lecturer if they will not attend the class due to sickness, etc.</li> <li>o Students must submit all class assignments before the deadline.</li> <li>o Students must attend the exam to get final grade.</li> </ul> <b>Form of examination:</b><br>Written exam: Essay |
| Form of assessment   | Assessment is carried out based on: <ul style="list-style-type: none"> <li>o Individual assignment – written.</li> <li>o Midterm exam – written.</li> <li>o Final exam – written and/or oral.</li> </ul>  |

| Workload                                  | 1. Lecture; <ul style="list-style-type: none"><li>o Class meeting; 16 x 2 x 50 minutes.</li><li>o Structured assignments; 16 x 2 x 60 minutes.</li><li>o Self-learning; 16 x 2 x 60 minutes.</li></ul> 2. Total workload = 5440 minutes.  |
| Credit point                              | 2 credits   |
| Prerequisites                             | Mining GIS (Geographic Information System).   |
| Intended learning outcomes                | <b>Skill And Competence</b><br>1. To apply logic and innovative thinking in developing knowledge and technology and problem solving within the area of expertise. (ILO-04)<br>2. To be able to apply principles of knowledge and technology in developing technical design of mining. (ILO-05)  |
| Course learning objectives                | Able to operate Computer Aided Design for mining application  |
| Module content                            | 1. Defenition and function of AutoCAD in mining cases.<br>2. 2D drawing techniques with AutoCAD and its apploications in geology and mining.<br>3. 3D drawing techniques with AutoCAD and its applications in geology and mining.   |
| Applicability                             | Elective in Bachelor Degree in Mining Engineering.  |
| Admission and Examination requirement     | Minimum attendance requirement 80% from total lecture.<br><b>Study and examination requirements:</b> <ul style="list-style-type: none"><li>o Students must attend 15 minutes before the class starts.</li><li>o Students must switch off all electronic devices.</li><li>o Students must inform the lecturer if they will not attend the class due to sickness, etc.</li><li>o Students must submit all class assignments before the deadline.</li><li>o Students must attend the exam to get final grade.</li></ul> <b>Form of examination:</b><br>Written exam: Essay |
| Form of assessment                        | Assessment is carried out based on: <ul style="list-style-type: none"><li>o Individual assignment – written.</li><li>o Midterm exam – written.</li><li>o Final exam – written and/or oral.</li></ul>  |
